High Performance Bus Interface Solutions

16HSDI

16-Bit, Six-Channel Sigma-Delta Analog Input PMC Board

With 1.1 MSPS Sample Rate per Channel, and Two Independent Clocks

Available in PMC, PCI, cPCI and PC104-Plus and PCI Express form factors as:

PMC-16HSDI:	PMC, Single-width
PCI-16HSDI:	PCI, short length
cPCI-16HSDI:	cPCI, 3U
PC104P-16HSDI:	PC104-Plus
PCIe-16HSDI:	PCI Express
PCIe104-16HSDI:	PCIe, one-lane on PC/104 form factor

See Ordering Information for details.

Call for availability of other form factors, such as XMC, CCPMC, etc.

Features Include:

- Sigma-Delta Conversion; No External Antialiasing Filters Required
- High Effective Sampling Rate; 16-32 Times the Effective Rate of Successive Approximation Converters Operating at the Same Conversion Rate
- Integral Antialiasing Input Filters Reject Out-of-Band Interference Components
- Software-Selectable Ranges: ± 1.25 Volts, ± 2.5 Volts, ± 5 Volts or ± 10 Volts
- Six 16-Bit Analog Input Channels; Dedicated Sigma-Delta Converter per Channel
- Sample Rates Adjustable up to 1,100 K-Samples per Second per Channel
- Two Independent Sample-Rate Generators; Adjustable with 0.2 Percent Resolution
- Low Noise; Typically Less than 0.4mVRMS RTI
- 64K-Sample FIFO Buffer with 2-Channel DMA support. All Data is Channel-Tagged.
- Harmonic Sampling Supported, with Clocking Ratios Between Channels from 1 to 20
- Auto calibration Uses Hardware Correction; No missing Codes Introduced
- Integral Shield Assures Minimum Susceptibility to Radiated Noise in PMC Environments
- Single-width PMC Form Factor
- VxWorks™ and WinNT™ Drivers are available

Applications Include:

Overview:

The 6-channel PMC-16HSDI analog input board provides high-density precision 16-bit analog input resources in a single-width PMC form factor. Optimized for flexibility and performance, the board is ideal for a wide variety of applications, ranging from precision voltage measurements, to the analysis of complex audio signals and waveforms. Each of the six sigma-delta analog input channels can be controlled by either of two independent sample clocks, and multiple channels can be harmonically locked together. Sample rates are adjustable from 30 KSPS to 1.1 MSPS, and the input range is software selectable as $\pm 1.25V$, $\pm 2.5V$, $\pm 5V$ or $\pm 10V$. Internal auto calibration networks permit periodic calibration to be performed without removing the board from the system.

Functional Description:

A PCI interface adapter provides the interface between the controlling PCI bus and the internal local controller through a 32-bit local bus (Figure 1). Each of the six input channels contains an input buffer, an adaptive digital-image filter, and a dedicated sigma-delta A/D converter (ADC). The inputs can be configured for either differential or single-ended operation, or an internal voltage reference can be applied to all channels to support self-test operations and auto calibration. Gain and offset trimming of the input channels is performed by calibration DAC's that are loaded with channel correction values during auto calibration. The use of calibration DAC's eliminates the missing codes that occur when analog input channels are calibrated exclusively in the digital domain.

Each ADC contains a digital antialiasing filter that rejects out-of-band signals above approximately 48 percent of the selected sample rate. Conversion data from all active channels is transferred to the PCI bus through a 64K-sample data buffer that has a software-controlled threshold for generating interrupt requests. Multiple channels can be synchronized to perform synchronous sampling, either by a software command, or by external hardware sync and clock input signals.

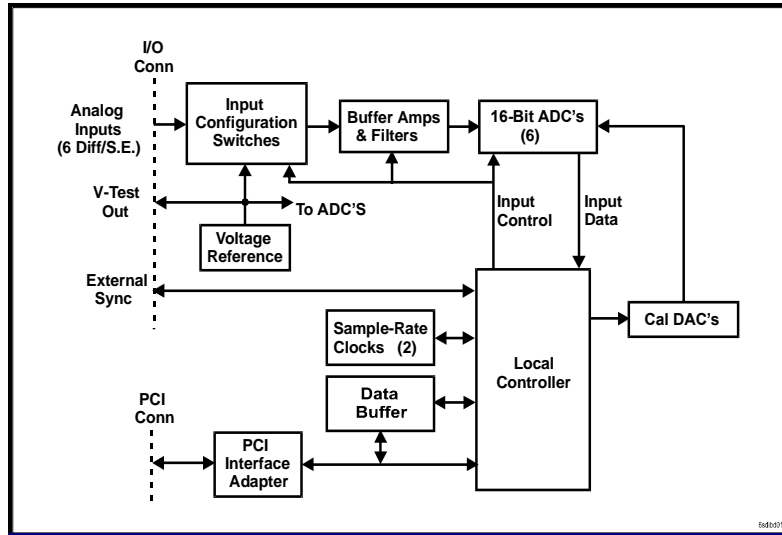

Figure 1. PMC-16HSDI; Functional Organization

This product is functionally compatible with the IEEE PCI local bus specification Revision 2.2, and supports the "plug-n-play" initialization concept. System input/output connections are made at the front panel through a high-density metal-shrouded 50-pin connector. Power requirements consist of +5 VDC, in compliance with the PCI specification, and operation over the specified temperature range is achieved with conventional air cooling.

ELECTRICAL SPECIFICATIONS

At +25 °C, with specified operating conditions.

Input Characteristics:

Configuration:	6 input channels, software controlled as differential or single-ended. Optional 2-channel and 4-channel configurations available.
Voltage Range:	Software Configurable as ± 1.25 Volts, ± 2.5 Volts, ± 5 Volts or ± 10 Volts
Input Impedance:	1.0 Megohm typical, in parallel with 20 pF. 2 Megohms line-line.
Common Mode Rejection:	80 dB, DC-60 Hz (Differential mode)
Common Mode Range:	± 10 Volts with zero normal-mode input
Offset Voltage:	± 0.6 millivolts, maximum
Signal-to-Noise Ratio (SNR)	85dB at 30 KSPS, 67dB at 1100KSPS, typical
Overvoltage Protection:	± 30 -Volt transient with power applied; ± 15 Volts with power removed

Transfer Characteristics:

Resolution:	16 Bits (0.0015 percent of FSR)		
Sample Rate:	30,000 to 1,100,000 samples per second per channel		
Oversampling Factor:	DC-500KSPS: x32, 500KSPS-1100KSPS: x16.		
DC Accuracy: (Maximum composite error)	<u>Range</u>	<u>Midscale Accuracy</u>	<u>\pmFullscale Accuracy</u>
	± 10 V	± 1.2 mV	± 5.2 mV
	± 5 V	± 1.1 mV	± 3.1 mV
	± 2.5 V	± 0.9 mV	± 2.2 mV
	± 1.25 V	± 0.8 mV	± 1.5 mV
Small Signal Bandwidth:	DC to approximately 48 percent of the selected sample rate		
Power Bandwidth:	DC to 2×10^6 Hz-Vpp minimum. Accepts 100kHz input at 20 VPP.		
Crosstalk Rejection:	84 dB typical, DC-10 kHz; 70dB DC-400kHz.		
Antialias Filtering:	Each ADC provides internal digital antialias filtering at approximately 48 percent of the selected sample rate. This digital filter is supported by a multi-pole analog filter that rejects interference at the harmonic images of the digital filter. The cutoff frequency of the analog filter in each channel is optimized automatically in response to the selected sample rate.		
Integral Nonlinearity:	± 0.003 percent of FSR, typical		
Differential Nonlinearity:	± 0.0015 percent of FSR, maximum		
Total Harmonic Distortion:	84 dB typical, from DC to 40 percent of sample rate

Operating Modes and Controls:

Organization:	Two 3-channel analog input groups, and two sample rate generators. Each channel group can operate from either rate generator. The sample rate for each individual channel is selected by dividing the frequency of the assigned rate generator by any integer from 1 through 20.
Sample Rate Generators:	Either of two independent internal rate generators can be assigned to any input channel group. Each generator is adjustable from 19.2 MHz to 38.4 MHz, and provides sample rates from 600 KSPS to 1200 KSPS after division by 32 (x16 oversampling), or from 300 KSPS to 600 KSPS after division by 64 (x32 oversampling). Subsequent division by an integer from 1 to 20 for each channel provides sample rates from 15 KSPS to 1200 KSPS. (Specified performance is guaranteed only within the range from 30 KSPS to 1100 KSPS). Settling time when changing frequencies is approximately 20 ms, and settling completion is selectable as an interrupt event. Setting resolution is 0.2 percent or less; accuracy is ± 0.08 percent.
External Clock I/O:	An LVDS hardware output clock can be derived either from a 16-32 MHz LVDS external hardware input clock or from an internal rate generator. The external clock input can be selected as the rate generator for any or all channels. Multiple boards can be locked to a common clock by daisy-chaining the output clock from each board to the input clock of the next board in the chain in an initiator-target configuration. The initiator clock source can be either an external rate generator ("Target-only Clock I/O" ordering option), or an internal rate generator ("Initiator/Target Clock I/O" option).
Synchronization:	Sampling can be synchronized within each channel group through software, or each group can be synchronized to an external LVDS hardware sync input. By using the daisy-chain configuration described for External Clock I/O, hardware sync inputs and outputs can be used to synchronize the sampling among multiple boards.
Harmonic Sampling:	Harmonic sampling ratios are implemented by adjusting the sample rates of channels within a group to specific fractions of the assigned rate generator frequency. (See Sample Rate Generators).
Data Format:	Software selected as either offset binary or two's complement
Data Buffer:	FIFO, 64K-Samples, 16-Bit data field, 3-Bit channel tag.
Buffer Size Register:	Contains the total number of samples present in the input data buffer.

PCI Compatibility:

Conforms to PCI Specification 2.2, with D32 read/write transactions.
2-Channel DMA transfers as bus master in both block and demand modes.
Single multifunction interrupt.
Universal (3.3V/5V) signaling available; contact factory.

Power Requirements:

+5VDC \pm 0.2 VDC at 1.5 Amps maximum

Power Dissipation: 6.0 Watts, Side 1
1.5 Watts, Side 2

Mechanical Characteristics: (PMC Form Factor)

Height: 13.5 mm (0.53 in)

Depth: 149.0 mm (5.87 in)

Width: 74.0 mm (2.91 in)

Shield: Side 1 is protected by an EMI shield.

* Mechanical dimensions are shown for the native PMC form factor. See Ordering Information.

Environmental Specifications:

Ambient Temperature Range: Operating: 0 to +55 degrees Celsius
Storage: -40 to +85 degrees Celsius

Relative Humidity: Operating: 0 to 80%, non-condensing
Storage: 0 to 95%, non-condensing

Altitude: Operation to 10,000 ft.

Cooling: Conventional convection cooling; 200 LPFM.

Ordering Information:

Specify the basic product model number (PMC-16HSDI), followed by an option suffix "-ABC", as indicated below. For example, model number PMC-16HSDI-6T describes a PMC module with 6 input channels and target-only clock I/O.

Basic Model Number	Form Factor
PMC-16HSDI	PMC (Native)
PCI-16HSDI ¹	PCI, short length
cPCI-16HSDI ¹	cPCI, 3U
PCle-16HSDI ¹	cPCI, 3U
PC104P-16HSDI	PC104- <i>Plus</i> (Native)
PCle104-16HSDI ^{1,2}	PCle, one-lane on PC/104 form factor

¹ Module installed and tested on an adapter, with mechanical and functional equivalency. Contact factory for availability in native form factors.

² PCle104 supports only the PCle bus.

Optional Parameter	Value	Specify Option As:
Number of Input Channels:	2 Channels	A = 2
	4 Channels	A = 4
	6 Channels	A = 6
External Clock I/O Control	Initiator/Target Clock I/O	B = IT (or blank if no custom feature applies)
	Target-only Clock I/O	B = T
Custom Feature *	Buffer threshold flag output	C = NU

* Determined by specific feature. Blank or zero (0) if no custom feature applies.
