High Performance Bus Interface Solutions

66-16AO16

16-Channel 16-Bit Differential High-Speed PMC Analog Output Board

With 450,000 Samples per Second per Channel, and 66 MHz PCI Support

Available in PMC, PCI, cPCI and PC104-*Plus* and PCI Express form factors as:

PMC66-16AO16:	**PMC**, Single-width
PCI66-16AO16:	**PCI**, short length
Cpci66-16AO16:	**cPCI,** 3U
PC104P66-16AO16:	**PC104-*Plus***
PCIe66-16AO16:	**PCI Express**
PCIe10466-16AO16:	**PCIe, one-lane on PC/104 form factor**

See Ordering Information for details.
Call for availability of other form factors, such as XMC, CCPMC, etc.

Features Include:

- **16 Precision 16-Bit High-Speed Analog Output Channels; D/A Converter per Channel**
- **Balanced 3-Wire Differential Outputs, or Optional 2-Wire Single-ended Outputs with Remote Ground Sensing**
- **66MHz PCI Bus Support**
- **Data Rates to 450K Samples per Second per Channel; 7.2 MSPS Aggregate Rate**
- **Software-Selectable Output Ranges of ±10V, ±5V, ±2.5V or ±1.25V; Optional ±20V,±10V, ±5V differential output ranges**
- 256K-Sample Output Data FIFO Buffer; Configurable as Open or Circular
- Simultaneous or Sequential Output Clocking
- Multiboard Synchronization Supported
- Continuous and Burst (One-Shot) Output Modes Support Seamless Waveform Sequencing
- Data Rate Controlled Internally or Externally
- Software-Selectable Differential Clock I/O for Synchronizing Sigma-Delta A/D Boards
- High Accuracy Ensured by On-Demand Autocalibration of all Channels
- Extended-temperature version available
- Available on Adapters for Alternate Form Factors: PCI, cPCI, PC104-*Plus*

Applications Include:

- ✓ Precision Voltage Source
- ✓ Audio Synthesis
- ✓ Acoustic Research
- ✓ Process Control
- ✓ Waveform Synthesis
- ✓ Industrial Robotics

REV: 051111

Overview:

The PMC66-16AO16 board contains sixteen 16-bit D/A converters (DAC's), and all supporting functions necessary for adding precision high-speed differential or single-ended analog output capability to a PMC, PCI, cPCI or PC104-*Plus* application. Output ranges are software-selectable as ±10 Volts, ±5 Volts or ±2.5 Volts. The board is functionally compatible with the IEEE PCI local bus specification Revision 2.3, and supports both 66MHz and 33MHz PCI bus speeds with universal signaling. Unique FIFO buffer controls support the seamless sequencing of successive waveforms through a single buffer port. In less demanding applications, the outputs can be updated individually. Hardware clock I/O permits synchronization with a variety of GSC products, including Sigma-Delta ADC boards.

A PCI interface adapter provides the interface between the controlling PCI bus and the internal local controller (Figure 1). Sixteen output channels are controlled through an analog output FIFO buffer, and can be updated either simultaneously or sequentially. The output sample rate can be controlled by an internal rate generator or by an external clock. The local controller manages all input/output configuration and data manipulation functions, including autocalibration. Analog output levels are initialized to zero (midrange). Multiboard synchronization is supported.

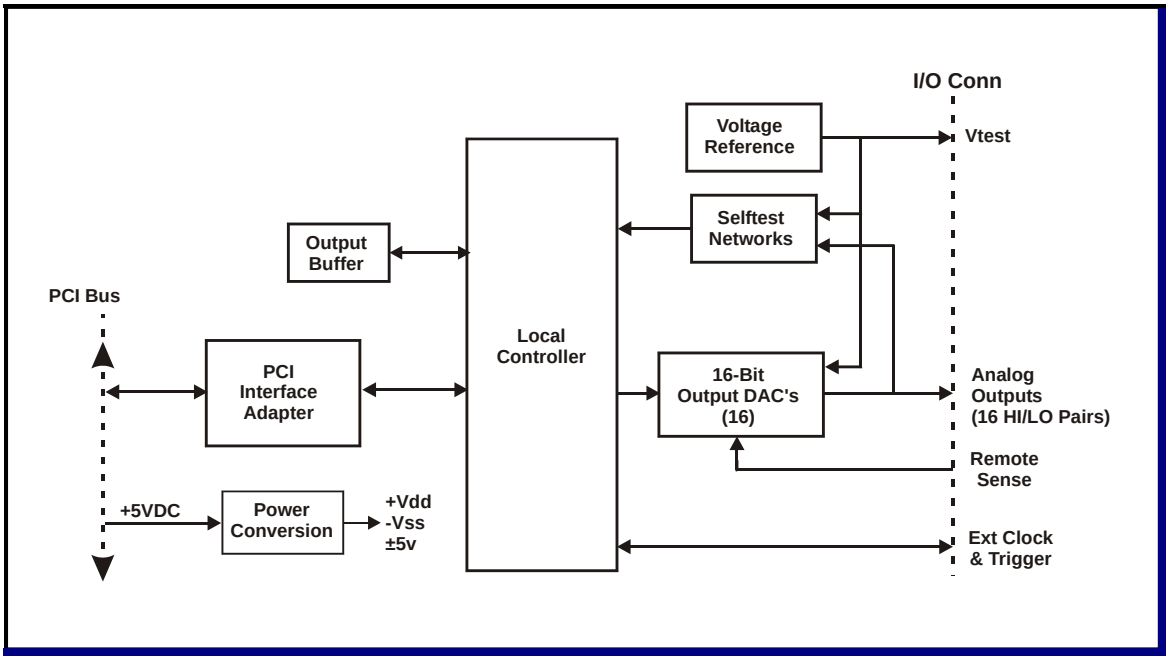

Figure 1. PMC66-16AO16 Board; Functional Organization

This product is designed for minimum off-line maintenance. On-demand autocalibration eliminates the need for disconnecting or removing the module from the system for calibration. All analog input and output system connections are made through a single 68-pin I/O connector. Power requirements consist of +5 VDC, in compliance with the PCI specification, and operation over the specified temperature range is achieved with conventional convection cooling.

Electrical Specifications

(At +25 ^{O}C, with specified operating conditions)

Analog Output Channels

Output Characteristics:

Configuration:	Sixteen 3-wire balanced differential analog output channels, with a dedicated 16-Bit DAC per channel. Each 3-Wire output consists of complementary 'HI' and 'LO' signal lines, with 'output return' as the center (balance) reference. All output returns are electrically common internally. Optional 12-channel and 8-Channel configurations are available, as well as 2-wire single-ended analog outputs with remote ground sensing.
Voltage Ranges:	Software-selected as ±10V, ±5V, ±2.5Vor ±1.25V, Line-to-Line for differential configuration. Line-to-Ground with Single-Ended option (Output-HI relative to output return). Optional High-Level (HL) ±20V, ±10V, ±5V differential outputs . See Ordering information.
Output Resistance:	1.0 Ohm maximum
Protection:	Withstands sustained short-circuiting to ground without damage
Load Current:	±3 ma maximum; ±2 ma recommended for minimal crosstalk and line loss
Load Capacitance:	Stable with zero to 10,000 pF shunt capacitance; all ranges, all loads.
Settling Time (Typical):	No Filter : 5 us to 0.1%, 8 us to 0.01% 100 kHz Filter: 14 us to 0.1%, 18 us to 0.01% 10 kHz Filter: 100 us to 0.1%, 140 us to 0.01%
Noise:	No Filter: 1.3 mVRMS, 10Hz-10MHz 10 kHz Filter: 0.4 mVRMS, 10Hz-10MHz
Glitch Impulse:	±2.5V Range: 3 nV-Sec max.. ±10V Range: 8 nV-Sec
Remote Sensing: (Single-ended outputs)	Single input pin compensates for ground potential at load. Max range ±1.0V. Enabled or disabled through application software. Correction ±1 percent. Input resistance: 15K typical.

Transfer Characteristics:

Resolution:	16 Bits (0.0015 percent of FSR)
Sample Clocking Rate:	Internal Rate Clock: 172 to 450,000 samples per second per channel External Rate Clock: 0 to 450,000 samples per second per channel

DC Accuracy, Line-Line: (Max error, no-load)

Range	Midscale Accuracy	±Fullscale Accuracy
±20V	±4.2mv	±7.0mv
±10V	±2.4mv	±3.3mv
±5V	±1.7mv	±2.2mv
±2.5V	±1.4mv	±1.6mv
±1.25V	±1.2mv	±1.4mv

Output Balance:	10mV maximum HI/LO unbalance.
Bandwidth	10 kHz, 100 kHz and No-Filter (>300 kHz) options, Typical at -3dB. (Single-pole lowpass)
Crosstalk Rejection:	80 dB minimum, DC-50 kHz
Integral Nonlinearity:	±0.007 percent of FSR, maximum
Differential Nonlinearity:	±0.003 percent of FSR, maximum

Operating Modes and Control

DAC Clocking Source:	Internal rate generator, external hardware input, or software clock. The internal rate generator is software-controlled with 0.2% setting resolution, and ±0.02% accuracy.
Multiboard Clocking Configurations:	To support the simultaneous clocking of DAC outputs on multiple boards, the 16AO16 can be software-designated as either a clock initiator or a clock target. Initiators provide an output clock for target boards, each of which can retransmit the clock signal to subsequent boards connected in a daisy-chain configuration.
Burst Trigger:	Software control bit, or external TTL/LVDS trigger input (Same as clock I/O option). Burst triggering also can be obtained from an external source.
Update Mode:	Simultaneous or channel-sequential output updating
Active Buffer Size:	From 8 output values to 256K-values, in 2:1 steps, software-selectable.
Buffer Mode:	Selected as Circular for periodic waveforms, or as Open for one-shot functions
Data Format:	Software selected as Offset Binary or Two's complement

PCI Compatibility

Conforms to PCI Specification 2.3, with 66 MHZ or 33 MHz bus and D32 read/write transactions.

Universal I/O supports both 3.3V and 5V signaling.

Multifunction interrupt.

Supports block-mode DMA transfers as bus master.

Power, Mechanical and Environmental Specifications

Power Requirements:

+5VDC ±0.25 VDC at 1.5Amps maximum, 1.1 Amp typical. Outputs fully loaded.

Power Dissipation: 7.5 Watts max; 5.5 Watts typical

Mechanical Characteristics: (PMC Form Factor)

Height:	13.5 mm (0.53 in)
Depth:	149.0 mm (5.87 in)
Width:	74.0 mm (2.91 in)
Shield:	Side-1 is protected by an EMI shield.

Power, Mechanical and Environmental Specifications (Continued)

Environmental Requirements:

Ambient Temperature Range:

Standard Temperature:	Operating: 0 to +70 Degrees Celsius * Storage: -40 to +85 Degrees Celsius
Extended Temperature:	Operating: -40 to +85 Degrees Celsius * Storage: -40 to +85 Degrees Celsius
	* Air temperature at board surface.
Relative Humidity:	0 to 95%, non-condensing
Altitude:	Operation to 10,000 ft.
Cooling:	Conventional air cooling; 150 LFPM

Ordering Information

Specify the basic model number followed by an option suffix "-A-B", as indicated below. For example, model number PMC66-16AO16-12-F10 describes a PMC module with 12 differential output channels and 10 kHz output filters.

Basic Model Number	Form Factor
PMC66-16AO16	PMC (Native)
PCI66-16AO16[1]	PCI, short length
Cpci66-16AO16[1]	cPCI, 3U
PCIe66-16AO16[1]	cPCI, 3U
PC104P66-16AO16	PC104-*Plus*
PCIe10466-16AO16[1,2]	PCIe, one-lane on PC/104 form factor

[1] Module installed and tested on an adapter, with mechanical and functional equivalency. Contact factory for availability in native form factors.

[2] PCIe104 supports only the PCIe bus.

Optional Parameter	Value	Specify Option As:
Number of Output Channels:	**8 Channels**	**A = 8**
	12 Channels	**A= 12**
	16 Channels	**A = 16**
Output Lowpass Filter: (Single-pole)	**No output Filters (>300kHz)**	**B = F0**
	10 kHz Output Filters	**B = F10**
	100 kHz Output Filters	**B = F100**
Output Configuration:*	**Differential**	**C = DF**
	Single-Ended	**C = SE**
Custom Feature:	**High-Level Differential Outputs (±20V,±10V, ±5V differential output ranges)**	**D = HL**
	(TBD)	**---**

* Differential outputs are essentially immune to ground potential differences, and do not implement compensation for ground potential at the load. Single-ended outputs are affected by remote ground potentials however, and are supported with a Remote Ground Sense input to compensate for potential differences between the PMC66-16AO16 and the load.
